1 / a key operation

One-touch measurement of blood pressure, automatic completion of the whole process of measurement.

2 / measurement memory

Double each group of 99 memory, automatic storage of measurement results, for you to keep in mind the daily blood pressure value.

We both husband and wife have a record!
Memory is not good, but fortunately he has
2-3cm
Number of memory groups

3 / smart voice broadcast

Older, vision is not very good, with the ears to listen to the whole process of measurement!

Old man: one to know, today your blood pressure is not high!

4 / accurate measurement

Selection of imported chips, the use of dual filtering algorithm to comprehensively improve the measurement accuracy.

5 / IHB heart rate test

In the measurement of blood pressure at the same time on the heart rate is also tested, a machine more use.

Heart rate display

6 / voltage, power detection

Voltage, power is too low, automatic prompt, power shortage will affect the normal use

59mm

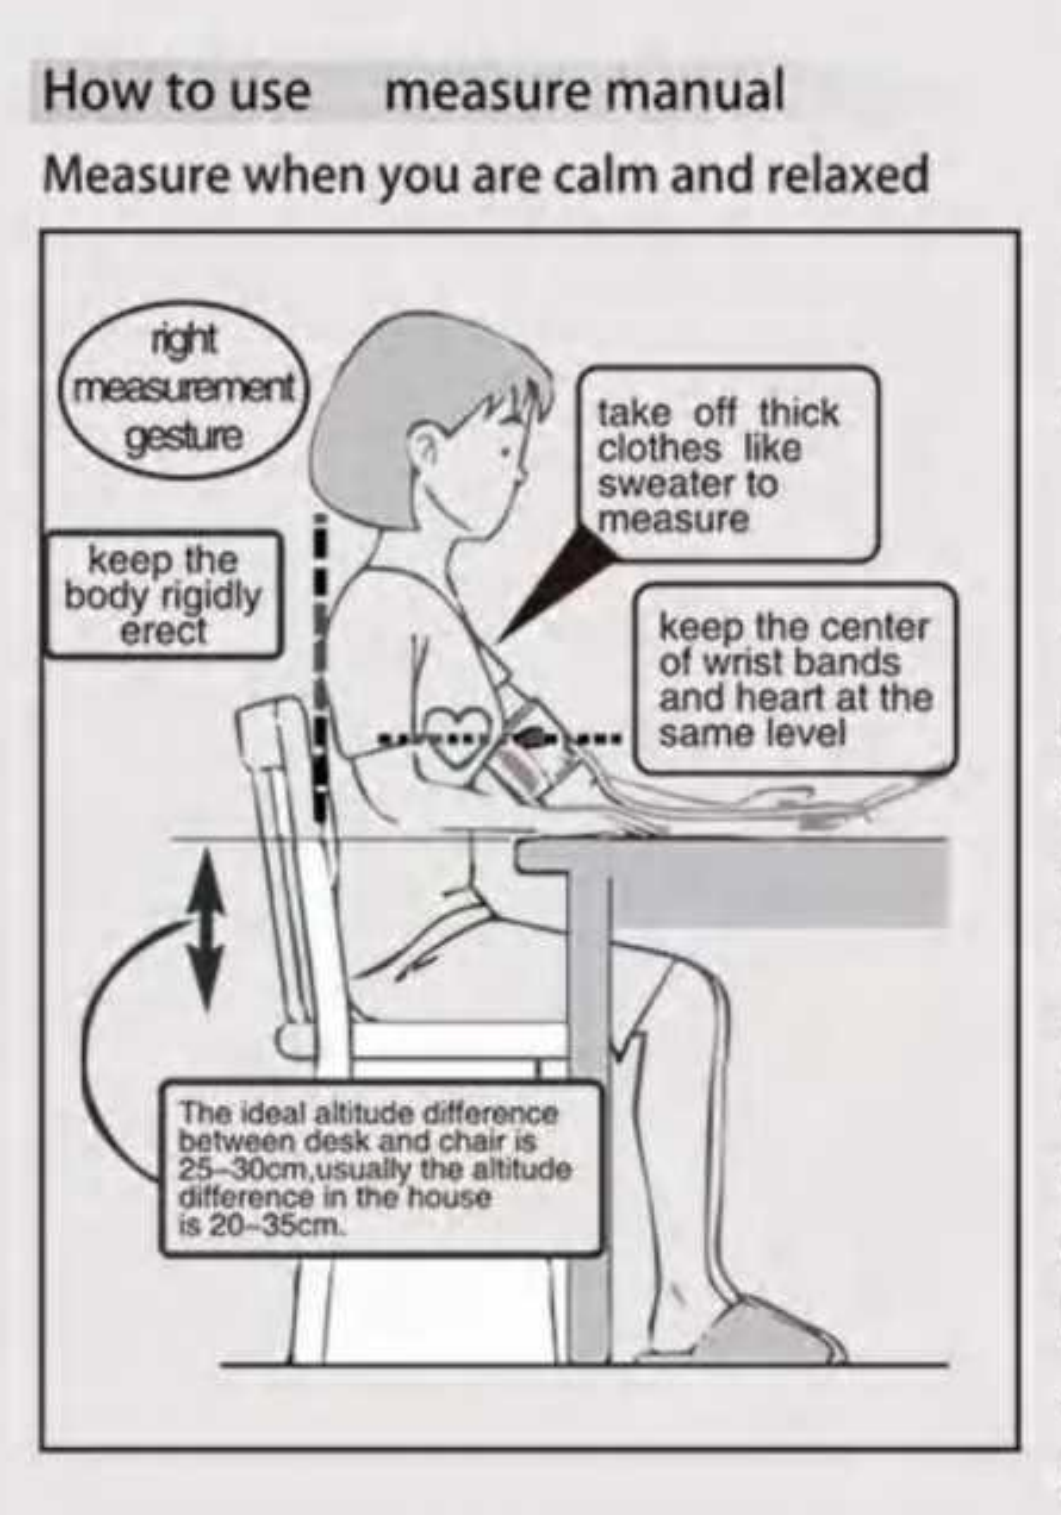
Note: manual measurement, the specific machine shall prevail

Correct measurement method

How to use measure manual

How to use measure manual

Measure when you are calm and relaxed



right measurement gesture
keep the body rigidly erect
take off thick clothes like sweater to measure
keep the center of wrist bands and heart at the same level
The ideal altitude difference between desk and chair is 25~30cm,usually the altitude difference in the house is 20~35cm.

1. Place elbow on the desk.
2. The wrist band and heart on the same level.
3. Palm up and relax.

Measure at the same time with the same arm and same gesture each day

·position of the wrist band will cause the result to change.

· you'd better measure your basic blood pressure , (pressure of wake up and do not want emiction in the morning), if you cannot , please take before marl or sports.

·do not touch instrument , wrist band and air tube be quiet and relaxed during measuremnet
